Profile Summary

Software engineer with a backend and systems foundation in Go, JavaScript, and Rust, now specializing in applied machine learning and AI development with Python. Built end-to-end ML systems — including document classification pipelines, gradient boosting models with SHAP-based explainability, and LLM-integrated applications using RAG and multi-agent patterns — on top of an intensive two-year bootcamp covering concurrent services, CI/CD, and full-stack architecture. Comfortable across the full development lifecycle from data ingestion and model evaluation through to deployment, with electronics and IoT background that informs reasoning across hardware signals, data pipelines, and cloud-based software systems.

Core Skills

CATEGORY	SKILLS & TOOLS
GEN AI APPLICATION PROGRAMMING	Foundation Model Evaluation & Selection, RAG, Prompt Engineering, LLM Agents and tool use, Guardrails & Safety, Model Monitoring, CI/CD for AI Apps
DATA & DB	C/C++ (Embedded), Python (Data Handling & Analytics), Go (Concurrent Device Services), Rust (Low-Level Performance), JavaScript (FullStack)
DEVOPS	SQL (MySQL, MariaDB), SQLite, NoSQL (JSON), File I/O
FOUNDATIONS	Git, GitHub Actions (CI/CD), Docker, AWS, Agile Methodologies, Scalability Optimization
	Data Structures & Algorithms, Electrical Circuit Theory, Control Systems, Digital Signal Processing,

Work Experience

SOFTWARE DEVELOPER BOOTCAMP

| Jan 2024 – March 2026 Zone 01 Kisumu

Full-Stack Developer Training Program

Data Processing Optimization: Designed and implemented scalable backend services in Go for efficient data ingestion and preprocessing, improving raw data processing efficiency by 25% through optimized memory management and concurrent programming.

- Designed and implemented concurrent backend services in **Go** for data ingestion and preprocessing, improving throughput and memory efficiency by ~25%.
- Built **CI/CD pipelines** using GitHub Actions to automate testing and deployment, reducing release cycles from hours to minutes.
- Front-End Experience: Built responsive, cross-browser compatible frontends with HTML, CSS, and JavaScript, demonstrating an understanding of the full application stack from data visualization to user interaction.
- Agile Practice: Collaborated in peer-to-peer projects, applying Agile and DevOps practices to manage tasks and ensure the timely delivery of complex project milestones

Education:  Diploma Electrical Engineering – Dedan Kimathi University Of Technology | **Sept 2021 – Dec 2023**
